

Triggers, logic, and data lookups are free. Credits are only consumed when a block writes data, sends or receives something externally, or uses AI.

WHAT EVERY BLOCK COSTS (NEW ENGINE, JUNE 2026)

CATEGORY	BLOCKS	COST
Triggers	All of them — record events, schedules, webhooks, manual	Free
Logic & control	Filter, If, Switch, Loop, Delay, Round robin, Celebration, Broadcast message, Random number	Free
Lookups & math	Find records, Find list entries, Formula, Aggregate values, Adjust time, Parse JSON	Free
Data writes	Create record, Create or update record, Update record, Add record to list, Update list entry, Delete list entry, Create task, Complete task	1 credit
External	Send HTTP request, Enroll in sequence, Exit from sequence, integration blocks (Slack, etc.)	1 credit
AI	Classify record, Classify text, Summarize record, Web agent, Custom agent	Variable (token-based)
Code	Execute code	Variable (complexity-based)

THREE LOAD-BEARING DETAILS

- 1. **Only the executed path costs anything.** A Switch with five branches charges only the branch that ran.
- 2. **Failed blocks are free.** A run that dies at block four charges blocks one through three only.
- 3. **Loops multiply.** The Loop block is free; a 1-credit write inside it, run over 50 records, is 50 credits.

MONTHLY WORKSPACE CREDITS BY PLAN

FREE	PLUS	PRO	ENTERPRISE
250	1,500	10,000	Custom

Ask Attio uses personal **seat credits**; workflow runs use **workspace credits**. AI *attributes* are a separate pricing system — don't conflate.

WORKED EXAMPLES

- Stage-change Slack alert**
trigger (0) + Filter (0) + Slack (1) = 1 credit/alert. 200 alerts/mo = 200 credits.
- Weekly stale-deal sweep**
schedule (0) + Find records (0) + Loop (0) + Create task (1) × 30 = 30 credits/week.
- Inbound lead research**
trigger (0) + Web agent (variable) + Update record (1) + Slack (1). Test on 10 records, read per-run cost in the run viewer, then scale.

CONTROLLING AI COST (CAPS ARE GONE)

- 1. Filter *before* the AI block — free gatekeeping.
 - 2. Trim prompts: fewer questions = fewer tokens.
 - 3. Test on a sample, extrapolate, then wire to volume.
 - 4. Watch Billing → Credits → Usage weekly at first.
- Per-workflow credit caps were removed in the new engine — filters and small test batches are the only guardrails.
